DETAILED ACTION

Claim Objections

Claims 5-7 and 9-14 are objected to because of the following informalities: In claims 5 and 9, "the handle member" should be replaced by – the instrument handle – to maintain proper antecedent basis. Appropriate correction is required.

Claims 12 and 13 are objected to because of the following informalities: Claim 12 should depend from claim 5 and not claim 4. Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 3-14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 3, 4, 8, 12, and 14 recite "especially" or "preferably". This language renders the claims indefinite because it is not clear whether the claims are positively limited by the language that follows "especially" or "preferably". Therefore, the metes and bounds of the claims are not clearly set forth as required.

Appropriate correction is required.

Allowable Subject Matter

Claims 1 and 2 are allowed.

Claims 3-14 would be allowable upon correction of the preceding claim objections and 35 U.S.C. 112, second paragraph rejections.

The following is a statement of reasons for the indication of allowable subject matter:

Regarding independent claim 1, it is known in the prior art to have a surgical instrument with an effector that is rotatably and pivotably supported at one end. Klieman (U.S. Pat. No. 5,827,323) discloses such a surgical instrument, further wherein a gear train is provided for effecting a pivoting movement of the effector. Although Klieman does not disclose a gear train for effecting the rotational movement of the effector, it is known and obvious to use a gear train to effect this motion in view of the prior art (see U.S. Pat. No. 5,714,300 to Bales). Klieman and the prior art however, do not disclose a motion compensating member integrated in the rotational gear train so that a drive of the rotational gear train caused by a pivoting movement of the effector is compensated when the pivoting gear train is driven by the instrument handle to pivot the effector as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 3739
